

# Hearing on Cyber Security for Cybersecurity Issues for Local Governments and Municipal Authorities

Wednesday January 31, 2024

# The Strategically Resilient Digital Environment

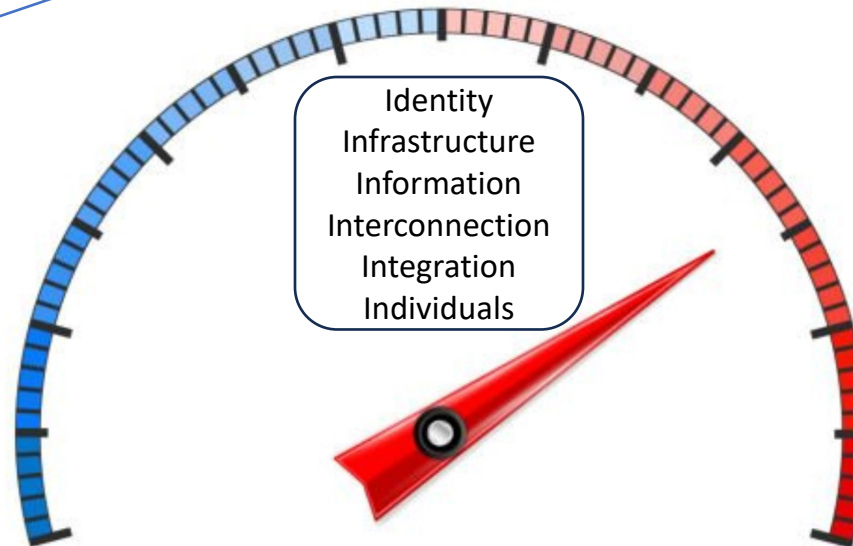

- **Statewide security baseline** for stable foundation against weak links
- **Identify is the strategic starting point** to ensure appropriate coverage
- Consider the **edge**, everything **internal**, and **external** connections and flow
- **Funding is not unlimited**, aim to prevent **and** prepare for recovery

## Aspire to Prevent an Intrusion:

Investment has been made with the intent to prevent or stop threats before damage occurs.

Protect and Detect to deliver a risk-appropriate level of resilience against potential impact, but prevention is never an absolute.

## The Inevitability of a Breach:

Funding will never be enough to guarantee prevention. In reality, it's "when, not if", something gets through to cause damage.

Response and Recovery capability through skills, automation, and sophisticated solutions beyond traditional backup is no longer optional.
